Jobs and internships description

Junior ERP PM:

As we expand our operations, we need more and more sophisticated financial analysis. We are producing weekly, monthly, yearly good estimation of our key financial indicators.

In preparation for growth, we need to automate some of our financial processes, integrate our order to cash process in a single system, increase the accuracy of our analytics.

We will complete a redesign of our key processes by end of 2022 and will open this internship at the beginning of 2023.

Junior Cybersecurity PM:

We have been operating at good levels of security for our own assets, but also giving good advice to our customers for the last 20 years. Now that cybersecurity is a general topic of interest, we must prove that this is not the result of luck.

We have decided to have our operations certified under ISO27001 – Information Security Management norm.

We will enlist the help of a professional consultant for key milestone in our certification preparation. The project is divided in three phases: analysis 2022 Q4, implementation 2023 H1, run 2023 H2.

This internship will cover the coordination of our implementation. It is both an opportunity to learn key elements of information security and certification and a chance to interact with key professionals in our company from all departments.
